Projects

Journal Crypt / React/Redux Client, Ruby on Rails API, Bootstrap

Journal Crypt is a React application with a Ruby on Rails JSON API backend. Users are authenticated with JSON web tokens through the use of the Knock gem. They are able to post private journal entries that only they have access to. Users have full CRUD functionality with their entries and are able to persist them to the database. Users will soon be able to encrypt individual entries.

WeCook! / Ruby on Rails, JavaScript, Bootstrap

WeCook is a rails application that allows users to upload their recipes to the website in order to share it with others. Users have full CRUD functionality with their accounts and their recipes. Users can search the website as well as sort using categories. This app makes use of nested routes, and the Ruby gem Devise. Users can also sign in using Facebook.

WishListar / Ruby, ActiveRecord, Sinatra, SQL, Bulma

WishListar is a CRUD application that allows users to create accounts where they can create and store items in their custom wishlists. WishListar helps users store any items they may desire from across the internet.
